

Dear Johnston

Aug 12 1915 ⁰¹⁵

Grinnell gathered the Mt Isidif
Species and he took them back
with him. He will give you
all the data.

Ribes Davisii I first gathered at
El Monte and is in my local list
as R. disarcuation. which we then
called it.

El Monte is I think the 1st record.
for Verbesina Encelioides about
1903?

I wish you would preserve a spec
of Solanum nigrum for me I have
not seen it.

Anacardium hybridus we have in
waste orchards but not so
common as A. reflexum.

Cyperus rotundus I do not know
at least under that name.

Seleneo virens is ^{fair} common
in the streets. What we have

been calling. Belaria Glauca
Hitchcock says. is the same
He is all wrong. I have both
under my eye. every day.
I have sent them to Nash
& shall let you know what
he says.

As to your Graphalium I
should like a specimen
when mature.

Immature they are deceptive.
I think the common coast
species that has passed
for G. decurrens is an

undescribed species

One of these days I shall
list it.

I shall ^{far} send you spec
of G. heneolens did I not. If
not - I shall send it -
your leaves are unlike any
here. Sincerely, J. B. Anderson
